

Viewing Raw Data

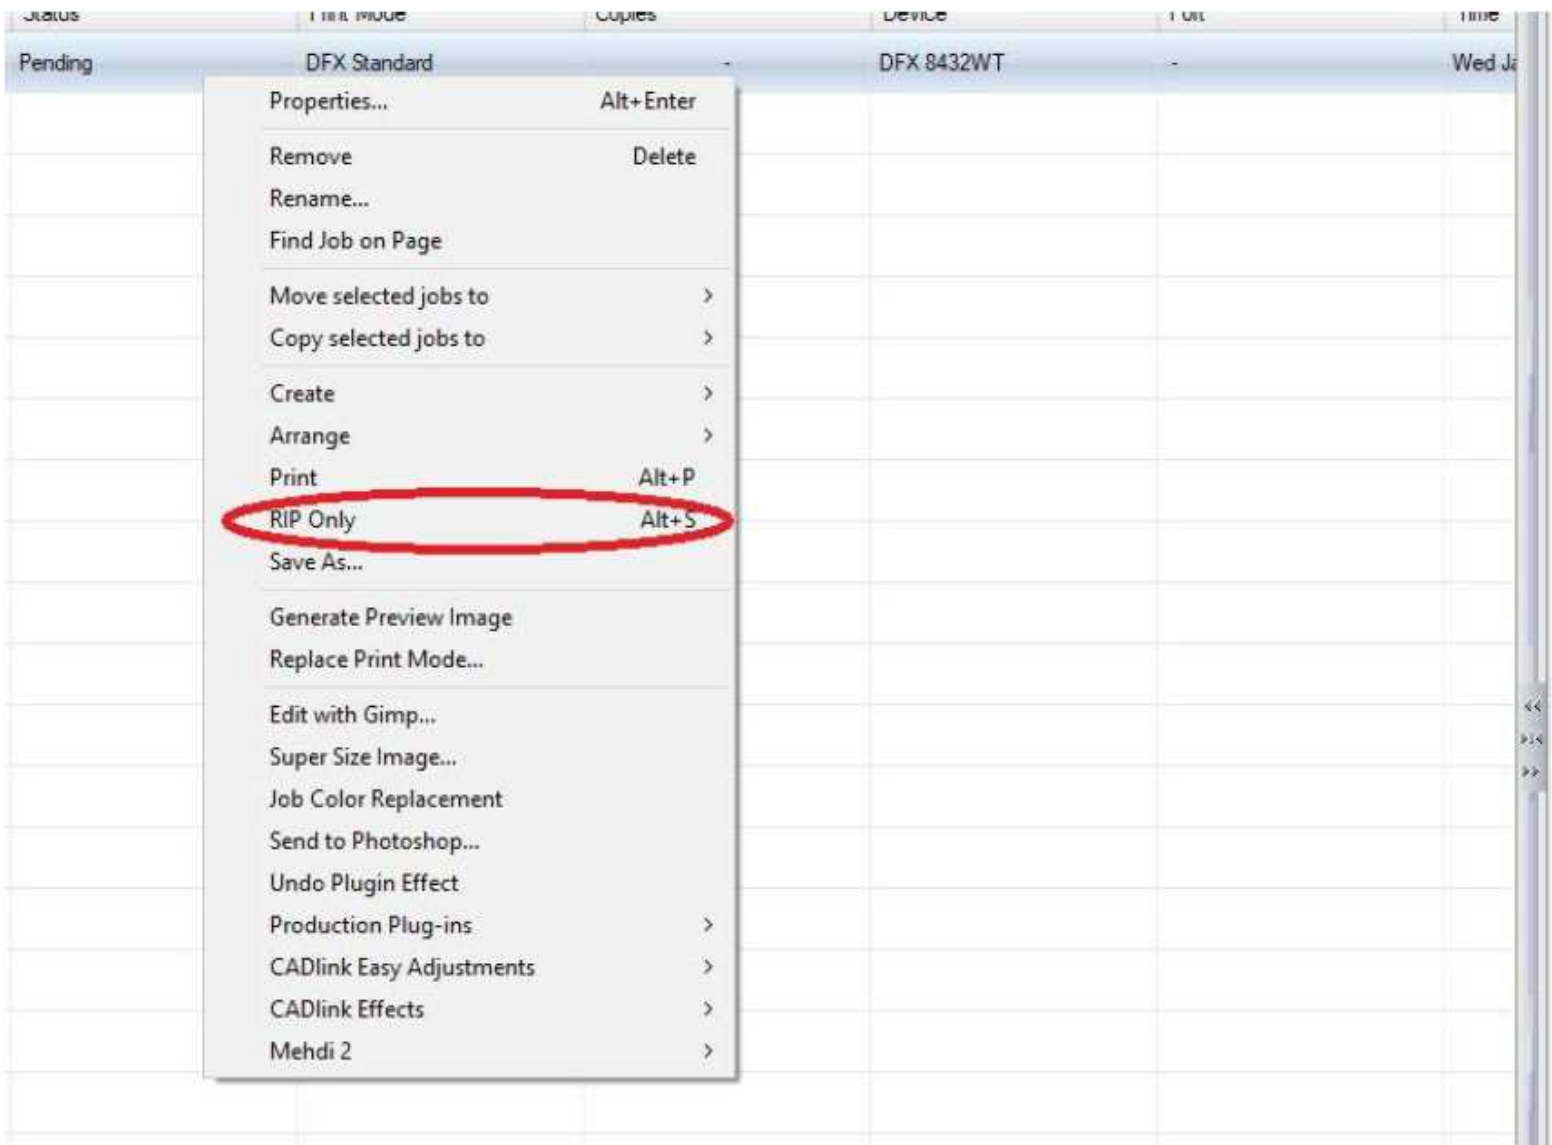

For DFX Print Optimizer

PRODUCTS USED

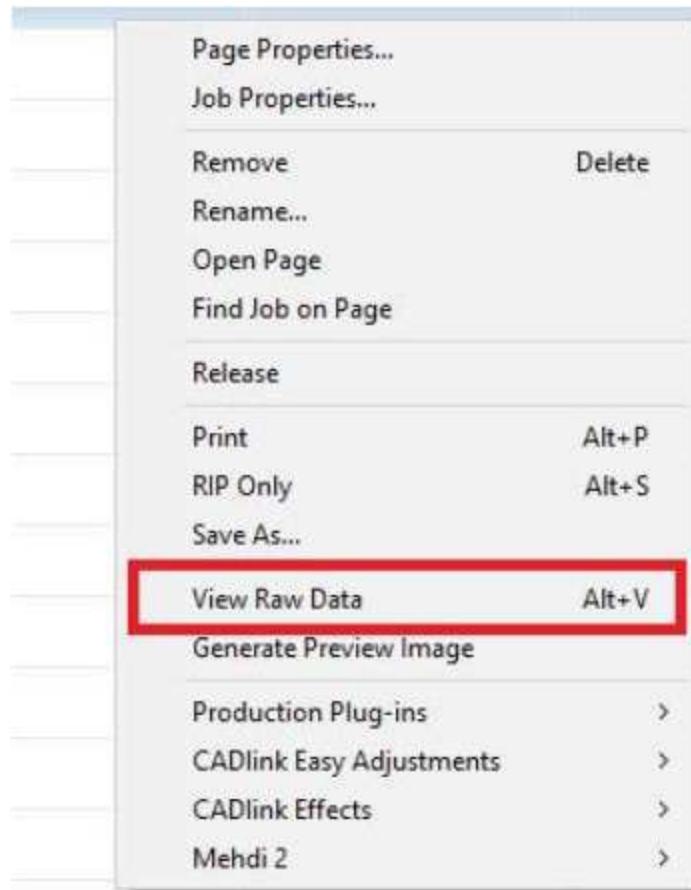

DFX Print Optimizer

Viewing Raw Data allows you to check to see how the image can look before printing.

1. Click the file in the queue that you would like to view. When the file is highlighted in **blue**, that means that the file is selected. Right-click on the file and click "RIP Only" from the list of options.

2. The file will then go through the rip process. Once the design has been "ripped", the status will change to "Holding [Job Spooled]". Once that appears, right-click on the highlighted file and then click on "View Raw Data" from the list of options.

3. This will now bring up a new window called the "View Raw Data Screen". This will give you a rough visual of how the image will print.

TIP:

To see where the colors are going to lay down, or if the image is still carrying a background, click on the "View All Colors As Black" icon.

This will turn all the colors black and will allow you to get a better visual of the data that the printer is going to see.
